Industrial enterprises could save billions
a year by implementing variable speed
drives (VSDs) on motors in their production
environment.**

ControlMaestro™ for Industrial Manufacturing & Process Control

ControlMaestro™ is a powerful and centralized industrial automation software (SCADA system) that monitors and controls the overall performance of industrial, infrastructure entire sites and facility processes. Operators are provided with real time schematic representation of controlled equipment, trending, diagnostic data, and information such as scheduled maintenance, logistic information, detailed schematics for sensors or machines, troubleshooting.

By collecting data from various points within the process and variations that may affect product quality, issues can be detected and corrected, thus reducing waste and costs.

Densoseal Chosen for York Heslington East Campus

Vital Energi of Blackburn is currently carrying out Biomass, Combined Heat and Power (CHP) and multi-utility infrastructure works at The University of York's new Heslington East Campus. In order to obtain effective and long term sealing from the entry of gas and water in all electrical service cable ducts, Vital Energi has chosen Winn & Coales Densoseal 16A sealant. Additionally, it was considered to be the most suitable sealant for use in renewable energy applications.

Densoseal 16A is a non-setting, self-supporting mastic which may be applied to wet surfaces and will seal ducts and conduits against ingress of water and gas. It is suitable for CHP and biogas projects. It complies with British Telecom Specification M212C. It is suitable for sealing cable ducts, conduits and service entry pipes or sleeves, particularly below ground level, to prevent entry of water or gas into buildings. It may also be used for profiling mechanical joints on hot pipes to allow application of tapes.

INDUSTRIAL DATACOMMS SOLUTIONS SYSTEMS

- ▶ NEW - USB-RS422/485 Isolated Converter
- ▶ Inline and DIN rail interface converters with isolation
- ▶ Automatic Driver Enable (ADE) on RS485
- ▶ DIN rail and standalone protocol converters
- ▶ Software for MODBUS protocol converter development
- ▶ Customised products available
- ▶ UK designed and manufactured

VENT DRYERS

The BROWNELL range of Vent Dryers has been developed to protect moisture sensitive fluids, oils and solvents from the harmful effects caused by water, condensation and high humidity.

- Gear Boxes
- Wind Turbines
- IBCs
- Storage Tanks
- Reservoirs
- Drums

- Quick and easy to install
- Visual colour change
- Prevents product contamination
- Rechargeable
- No energy requirements
- Constant protection
- Minimised pressure differentials
- Provide full weather protection
- Assist flame suppression
- Reduced odour emissions
- Dual thread mounting option

Caring for your oil and fluids
